Software requirements

All analysis were done in Stata version 16:

- Add-on packages are included in **libraries** and do not need to be installed by user. The names, installation sources, and installation dates of these packages are available in **scripts/libraries/stata.trk**.

Instructions

1. Save the folder ‘replication_package’ to your local drive.
2. Open the master script ‘**run.do**’ and change the global pointing to the working direction (line 20) to the location where you save the folder on your local drive.
3. Run the master script ‘**run.do**’ to replicate the analysis and generate all tables and figures reported in the paper and supplementary online materials.

Dataset

- The experimental and survey data are stored in **data/leader_raw.dta** for leaders and **data/villagers_raw.dta** for villagers.
- The Round 6 Afrobarometer data is stored in **data/afro_r6.dta**

Descriptions of scripts

scripts/01_cleaning.do

This script processes the raw experimental and survey data from all participants and prepares it for analysis.

scripts/02_generate.do

This script creates additional variables used in the analysis.

scripts/03_generate.do

This script creates figures and tables shown in the paper and saves them to **results/Figures** and **results/Tables**
